Lee Center for Ocular Pharmacology, and Professor of Ophthalmology, Microbiology & Molecular Biology, Eastern Virginia Medical School; Medical Director of the Lions Medical Eye Bank

About Kala Pharmaceuticals, Inc.

Kala is a biopharmaceutical company focused on the development and commercialization of therapeutics using its proprietary AMPPLIFY™ mucus-penetrating particle (MPP) Drug Delivery Technology, with an initial focus on the treatment of eye diseases. In preclinical studies, MPPs increased drug delivery into ocular tissues more than three-fold by facilitating penetration through the tear film mucus. Kala has applied the AMPPLIFY Drug Delivery Technology to a corticosteroid, loteprednol etabonate (LE), designed for ocular applications, resulting in recently approved INVELTYS™ for the treatment of inflammation and pain following ocular surgery and its lead product candidate, KPI-121 0.25%, for the temporary relief of the signs and symptoms of dry eye disease.
